

TriCal® Surge BRAND

Spring Triticale

Surge spring triticale is a cool season annual forage that we encourage you to plant if you're looking for a triticale. It is fast-growing and completely beardless with primary uses for silage, grazing, and hay. It produces high seed and silage yields with excellent quality. It grows well in cool environments allowing for earlier growth in the spring or later fall grazing as temperatures cool down. It will need to be spring planted in the Northern US but can be seeded in the fall for mid-latitudes of the US. Surge has been doing well across MT and topping the charts in ND trials.

Unauthorized Propagation Prohibited - PVPA 1994 - U.S. Protected Variety.
To be sold by variety name only as a class of certified seed.

7 year average silage yield (65% moisture): 9.1 tons/acre

Key Attributes

Awnless (completely beardless)

High forage yield

Great lodging resistance

Good disease package
